Patients suffer in silence without knowing there is an alternative. Patients prefer their family doctor oversee their total care. Diagnosing and treating airborne allergies in your clinic is within your scope of practice.

This presents a huge patient care opportunity in addition to a financial opportunity.

## Worldwide

Rise in prevalence of allergic diseases has continued in the industrialized world for more than 50 years.<sup>3</sup>

Sensitization rates to one or more common allergens among school children are currently approaching 40%-50%.<sup>3</sup>

In 2012, 10.6% or 7.8 million children reported respiratory allergies in the past 12 months.<sup>6</sup>

- Allergy 123 is a minimally invasive testing & treatment plan for 58 of the most common allergens.
- Results are read after 15 minutes.
- Allergy testing and immunotherapy is an FDA recognized treatment with established results.
- Most insurance providers reimburse for these services.

"I normally see allergy symptoms this time of year, and so far I've had no problems"

- Michelle H.

## It's as easy as 1 - 2 - 3

1- Test: Allergy testing is made simple with patented FDA approved technology. One simple 15 min test will identify 58 of the most common local airborne allergens. Additional positive and negative controls are also included in the test to demonstrate effectiveness.

2- Diagnose: Only the highest quality glycerinated extracts are used to ensure efficacious positives. Positives are easy to read, measure, and record. Possible patients eligible for allergy testing include those suffering from asthma, chronic cough, sinusitis, as well as allergic rhinitis and conjunctivitis patients.

3- Treat: Allergy 1•2•3 provides your practice with the tools to quickly and easily provide patients with a Custom Immunotherapy Compounded Pharmacy Product to deliver unique immunotherapy options custom designed for your patient. Patient receives injections at increasing doses at 6 week intervals until maintenance dose is achieved. Patient self-administers subcutaneous doses 2 times a week for 18 months and returns for allergy testing again to be retested and to continue on a maintenance program.

**Add your own allergy clinic to your primary care practice.**

Immunotherapy has been a well recognized FDA approved treatment with a long history of success. Treatment is customized for your patient and only requires six office visits.

Allergic rhinitis is considered a rising epidemic with one in five Americans seeking medical relief. Consider adding Allergy 1•2•3 to your primary care practice.

- Reimbursed through insurance
- Training, equipment, and just-in-time inventory to your practice
- All natural, customized extracts
- FDA approved treatment
- Test for 58 most common airborne allergens in 15 minutes
- Lifelong freedom from airborne allergies for your patients

Allergy 1•2•3 is a fee-for-service product provided by PREVENTATIVE HEALTH AND DIAGNOSTICS, a company devoted to providing state-of-the-art products and services to the medical community. PREVENTATIVE HEALTH AND DIAGNOSTICS offers innovative solutions to clinics to increase their profitability and patient satisfaction.

# 3-5 minute process
